

## THE COMPANY

**Dynaref Products** is a privately owned company supplying premium quality products into Australian Industries.

Established in 1988 we have developed relationships with many of Australia's major Foundries supplying them with premium products via our relationships with major International supply companies. We continue to develop our product portfolio for the Foundry Industry through the identification of new suppliers and products that compliment our current activities.

In addition, we have recently expanded our product range to supply other areas including both the ceramic and water treatment industries. This is a result of our Company developing an International contact base. Along with our current Foundry products, we have been successful in targeting high quality, high service supply companies in these fields.

As a result of our growing base of International contacts, Dynaref Products is well placed to identify quality sources for a vast array of products and materials. A directory of the current key products and companies we represent is featured on our product pages. However we are happy to work with both our existing and prospective clients to identify sources that meet their specific requirements.
